If you still have **symptoms** while on **T4 monotherapy**...

RenThyroid™ (Thyroid Tablets, USP) Because feeling “fine” isn’t enough.

A Natural Desiccated Thyroid (NDT) containing both T3 and T4

RenThyroid™ is a prescription medication used to replace or supplement thyroid hormones in patients with hypothyroidism.

Treating hypothyroidism is more than just a matter of getting your blood levels in check. It’s about feeling better.

RenThyroid contains a fixed ratio of T3 and T4 hormones, closely matching the natural hormone balance in the thyroid gland.

IMPORTANT SAFETY INFORMATION FOR RENTHYROID™

Thyroid hormone drugs, including RenThyroid, should not be used either alone or in combination with other drugs for the treatment of obesity. In patients with normal thyroid function, normal doses for daily hormone replacement are not effective for weight loss. Larger doses may cause serious or even life-threatening events, especially when used in combination with certain other drugs used to reduce appetite.

Please see additional Important Safety Information, including Boxed Warning, on the back.

USE:

RenThyroid™ (Thyroid Tablets, USP) is a prescription medication used to replace or supplement thyroid hormones in patients with hypothyroidism from any cause, except transient hypothyroidism during the recovery phase of subacute thyroiditis.

Note: RenThyroid has not been reviewed by the FDA for safety or efficacy.

IMPORTANT SAFETY INFORMATION:

THYROID HORMONE DRUGS, INCLUDING RENTHYROID, SHOULD NOT BE USED EITHER ALONE OR IN COMBINATION WITH OTHER DRUGS FOR THE TREATMENT OF OBESITY. IN PATIENTS WITH NORMAL THYROID FUNCTION, NORMAL DOSES FOR DAILY HORMONE REPLACEMENT ARE NOT EFFECTIVE FOR WEIGHT LOSS. LARGER DOSES MAY CAUSE SERIOUS OR EVEN LIFE-THREATENING EVENTS, ESPECIALLY WHEN USED IN COMBINATION WITH CERTAIN OTHER DRUGS USED TO REDUCE APPETITE.

- RenThyroid should not be used for male or female infertility unless this condition occurs with low thyroid levels.
- Do not use RenThyroid if you have uncorrected lack of adrenal hormones, high thyroid hormone levels, or allergies to any of the product ingredients.
- Taking too much RenThyroid may affect your cardiovascular system, especially if you are elderly or have heart problems. Tell your doctor immediately if you have any signs of chest pain, increased pulse, palpitations, excessive sweating, or any other unusual event.
- Tell your doctor about any other medical conditions you may have, especially heart disease, diabetes, blood clotting problems, and adrenal or pituitary gland problems. The dose of other drugs you may be taking for these conditions may have to be changed while you are taking RenThyroid. If you have diabetes, monitor your blood sugar levels and/or the glucose in your urine, and immediately tell your doctor if there are any changes.
- Tell your doctor about all of the medicines you take, including prescription and over-the-counter medicines, vitamins and supplements. Especially tell your doctor if you take anticoagulants, diabetes drugs, oral contraceptives, or biotin.
- In infants, excessive doses of RenThyroid may cause a condition called craniosynostosis (premature closure of the skull bones).
- In children, partial hair loss may occur during the first few months of taking RenThyroid.

This is not a complete list of risks. For more information, please talk to your doctor and visit www.renthyroid.com.

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch or call [1-800-FDA-1088](tel:1-800-FDA-1088). You may also report side effects to Genus Lifesciences at [1-610-782-9780](tel:1-610-782-9780) or Info@GenusLifesciences.com.
